

# Here's Something Interesting

Junious Ricardo Stanton

As most of my regular readers know, during the past three years, I have been extremely skeptical of the COVID narrative, essentially seeing it as a scam/scheme to: allow Big Pharma to make billions off of poorly tested, unsafe mRNA concoctions,

<https://www.brecorder.com/news/40112298/pharmaceutical-firms-rake-in-billions-with-covid-jabs>, the media to gain further control of our psyches for nefarious purposes, <https://neulinehealth.com/how-social-media-affects-your-brain/#:~:text=Researchers%20believe%20that%20since%20social,brain%20association,> governments to usurp more powers under the guise of public health/pandemic mitigation <https://thehill.com/opinion/judiciary/589248-coronavirus-v-government-overreach-which-is-worse/> and globalist plutocrats to implement their wicked agendas and attacks upon humanity. [https://www.theepochtimes.com/who-put-the-world-economic-forum-in-charge-of-everything\\_4982165.html?u](https://www.theepochtimes.com/who-put-the-world-economic-forum-in-charge-of-everything_4982165.html?u)

The media and government have waged relentless war against us-- attempting to stifle all dissent, suppress true scientific discussion and debate, and they are literally driving us insane using fear and advanced techniques of psychological warfare!

<https://unherd.com/2022/07/the-return-of-covid-fear-mongering/> <https://www.scientificamerican.com/interactive/the-biggest-psychological-experiment-in-history-is-running-now/>.

These facts are indisputable, and despite the censorship and propaganda each passing day, skeptics like me are proving to be correct in our assessments of the situation!

## Safety

Continued from page 2

ever, about a month ago, my innocence was stolen from me when a woman was shot on my block. That innocence will never be returned.

Shortly after that shooting, I received a call from my neighbor telling me my block was, once again, filled with police cars due to a domestic violence incident, and a week or so later, people were shot at on at my corner.

This is most unsettling. I have stopped my daily outside walks after 47 years out of an abundance of caution urged on by my younger male neighbors. And, there are few nights and even days that I go out of my house.

Before COVID, I used to know most of my neighbors and the young men around here. I was block captain, a white hat, had a table out front for voter registration, and was known as the "Queen or First Lady," receiving respect from all who passed my house. (Most knew me as the Owner of The Legendary Blue Horizon). As the promoter, I always gave out tickets.

Many nights coming in very late, you would see many young men sitting on my steps with me. I felt if you were passing my front that time of the morning, you may be up to "no good." I would point a finger at them and call them to sit with me until dawn. I never had anyone to challenge me or walk away. I also had a policy I did not want you hanging on the corners when I came in from work late.

I spent years working with Commissioner Sylvester Johnson and Charles Ramsey, and Capt. Nicole McCoy. I usually attend police meetings. I have spoken with CO Gregory Riley, Capt Matthew Gillespie, P/O Baukman, and Sarg. Johnson.

As the former executive director of a domestic violence organization, I was recognized for my work in the violence field in the community and in City Council. Still today, I continue to be an advocate against violence in the community. However, I still want the freedom to walk comfortably in my own neighborhood.

Political candidates. "What are you going to do to restore my comfort level in my neighborhood so that I can continue to serve my community," Vernoca Michaels asked.

Mayoral candidates, city council candidates, Sheriff, and other row offices are up for grabs. What are you going to do collectively to make us feel safe again in Philadelphia? We want to know.

Black people in the US and around the world have every reason to be skeptical and hesitant regarding the West's COVID remediation attempts--given the long, sordid nexus and history of eugenics, population control, medicine, and vaccines. What we are seeing and experiencing now is extremely alarming: escalating all-cause mortality and an ever-growing list of adverse reactions to the COVID jabs following the inject rollouts in December 2020; yet Big Pharma, the corporate mind control apparatus, and the governments continue to deny the existence of this humongous elephant in the room!

Here is something interesting that flies in the face of the COVID "vaccine" propaganda; the African continent has the lowest vaccine rates in the whole world and the lowest incidence of COVID infection! "Part of the African continent's success is no doubt due to a fortunate accident of microbiology, infectious diseases, pharmacology, and immunology. It so happens that two of the most effective treatments for COVID, Ivermectin and hydroxychloroquine, are also routine prophylactic weekly medicines throughout equatorial Africa because they happen to be known for a half-century as the most effective, applicable, and safest anti-parasite medications. So the population, particularly through about 31 countries, the tropical middle rectangle roughly of Africa already were well-equipped prior to COVID events launching in late 2019 to early 2020. As fortune would have it, the unpatented and relatively inexpensive half-century-old drug Ivermectin, whose inventors won the Nobel Prize for Medicine in 2015, also has been the most effective medicine against COVID, due in part to its specific effect against RNA transcriptase, as well as its blocking effect on all three parts of the trimeric spike protein, and other mechanisms."

## People with Hope Thrive! Local groups create new non-profit HopePHL™

PHILADELPHIA, PA, January 27, 2023--People's Emergency Center and Youth Service, Inc. announced their plan to integrate into one agency in November 2019. The two non-profit organizations officially began operating as a single organization, named HopePHL™ (pronounced "hopeful") on January 1, 2023.

The merger marked the conclusion of a three-year integration process that blended staff, organizational culture, and programs into a new comprehensive service organization for families, youth, and children across Philadelphia. Together, they were recognized for 120 combined years of service excellence in 2022.

HopePHL's mission is to inspire Philadelphia's children, youth, families, and communities to thrive by providing housing, advocacy, and trauma-responsive social services designed to promote equity, resilience, autonomy, and well-being.

"Together, we'll deliver many of the same services and some new programs, supporting over 25,000 community members, residents, and students annually to reach their goals of safe homes, economically secure and healthy families, and thriving students and businesses," said Kathy Desmond, President of HopePHL, who led PEC for the past seven years. She is a child welfare and social work expert with three decades of experience in the non-profit sector.

The two agencies have already partnered for several years on parenting programs, respite shelters for young children and services for youth and young adults experiencing homelessness. "As a combined entity, we can better share our complementary programs and expand services by combining our resources and leveraging each organization's specialized expertise," said Gwen Bailey, Vice President of Programs at HopePHL. Bailey, led YSI as Executive Director since 2004 but first joined the agency in 1988.

HopePHL is committed to advancing equity and ending systemic racism. They seek to amplify diverse voices and champion issues of inequity, including accessible quality education, healthcare, safety, and justice. Program offerings include:

<https://www.zerohedge.com/covid-19/africa-starkly-unvaccinated-and-starkly-unvanquished-covid#comment-stream>

Are you getting the significance of this? Our people in Africa were wise enough to eschew the mRNA injections, and it has paid off handsomely in the lowest rates of infection and concomitant vaccine adverse effects! Righteous leaders like the late John Magufuli, who earned degrees in chemistry, including a Ph.D., publicly exposed and ridiculed the uselessness of the COVID tests led the way. <https://www.reuters.com/article/us-health-coronavirus-tanzania/president-queries-tanzania-coronavirus-kits-after-goat-test> Many people believe--he was killed because of it. He died suddenly, and his successor Samia Suluhu Hassana a Western lapdog, immediately reversed his policies and pushed for injections (they are not vaccines in the original definition and sense of the word!)

<https://languagelog.ldc.upenn.edu/nll/?p=50886>

Magafuli and other brave African leaders set the tone for questioning, challenging, and rejecting the West's conclusions and narratives about COVID and their mitigation therapies. "This is not the first piece of evidence that Africa is leading the world away from a microbial-pretext tyranny. Last summer, Africa stood alone in being the continent, led by Botswana, to pull the world's people back from the precipice; while pushing the World Health Organization (WHO) back from their attempted tyranny over all world governments. This danger is by no means past, and new efforts for WHO dominance over the world are ominously re-grouping at this time. Africa led the way and inspires the world. Are the politicians and "public health experts" of the rest of the world humble enough to admit their grotesque errors, even crimes, and to learn from the peoples of the African nations, their experiences, and lessons on handling a pandemic? Or will ethnocentrism or hostile and racist pride, or the sheer greed stimulated by the lucrative COVIDmania boondoggle, prevent the rest of the world's willingness to learn from the African experience? Will such provincial and purchased attitudes bury the 21st century's most important lesson to date?" <https://www.zerohedge.com/covid-19/africa-starkly-unvaccinated-and-starkly-unvanquished-covid#comment-stream>

Oh and by the way, in case you think it was just a Black thing, Sweden rejected the farcical lockdowns and has shown that their approach fared better than most of their European neighbors! <https://unherd.com/the-post/sweden-reaps-the-benefits-of-its-no-lockdown-policy/>.

This is something interesting to think about; good food for thought

**HopePHL™**  
People with Hope thrive.

Children's Services, supporting the well-being, development, and education of children from birth through high school in shelters, the West Philadelphia Promise Neighborhood, and at partnering School District of Philadelphia schools.

Young Adult Services, offering respite, housing, education and access to technology, and support services for youth and young adults--experiencing homelessness, financial instability, and traumatic events.

Adult & Family Services, providing housing, social services, empowerment, reunification, and home visiting programs for families.

Community-Based Services such as homelessness prevention, art and culture programs, food relief, Lancaster Avenue commercial corridor support, and many other resources.

Resident-Driven Community Development programs supporting real estate development, affordable housing, and partnerships with city and state agencies.

Policy & Systems Advocacy initiatives, driving systems change to elevate issues impacting individuals and families at risk of or who are currently experiencing homelessness.
